ABOUTME

I am a full-stack developer with experience in frontend and backend development, as well as database management. I specialize in technologies like React, Next.js, and Supabase, and I have the ability to adapt to any tech stack depending on the project's requirements. I also develop desktop applications. I hold a University Technician degree in Programming from UTN FRT.

EXPERIENCE

Administrative and Software Developer

Alenort

Argentina
2024 – Present

- General administrative management in commercial environments.
- Stock manager: inventory control, incoming and outgoing merchandise.
- Account reconciliation with suppliers and payment tracking.
- Management of customer and supplier current accounts.
- Price updates and product verification.
- Handling of checks, cash deposits, and management of large volumes of money.
- Excel usage for reports, data analysis, and control.
- Use of billing and administrative management systems.
- Active participation in operational and commercial decision-making.

Software Development Projects for the Company

In addition to my administrative tasks, I developed customized technological solutions to improve different internal processes and enhance the company's digital presence:

- **Institutional website:** Designed and developed to strengthen the company's image, expand commercial reach, and present a more professional image to clients."
- **Daily revenue control system:** Enables clear and efficient registration and management of income from different points of sale."
- **Digital catalog with QR code access:** Customers can scan a QR code available at the store and on vehicles to easily access the full product catalog."
- **Employee attendance system:** Internal tool to register employee check-ins and check-outs, simplifying payroll management and time tracking.

TECHNOLOGIES

- **Languages:** HTML5, CSS3, JavaScript, TypeScript, PHP, C#, Rust
- **DataBases:** MongoDB, Firebase, MySQL, Supabase
- **Frameworks y Libraries:** Astro, Bootstrap, Express, Node.js, React, Next.js, Tailwind, Tauri
- **Tools:** Figma, Git, GitHub, Postman, Vercel, Notion, Netlify, Trello
